FIYAT LİSTESİ

"WE ALWAYS WORK FOR TOMORROW"

2009 yılında İstanbul Sancaktepe'de üretim faaliyetine başlayan Mekas Kablo, zayıf akım kablo sektöründe kısa sürede yüksek metrajlı üretim kapasitesine ulaşmış, sektörün bilinen firmaları arasında yer almayı başarmıştır.

Makine parkuruna ilave edilen yeni nesil makineler sayesinde yatırımlarına hızla devam eden Mekas Kablo, ürün çeşitliliği ve sahip olduğu pazarlama ağı ile yurt içinde 500'ü aşkın bayisiyle hizmet vermekte ve 60'ı aşkın ülkeye ihracat gerçekleştirmektedir.

Kendi bünyesinde kurduğu AR-GE ve test laboratuvarı sayesinde TSE, CE, ISO gibi belgeleri bünyesine katmış, üretim koşullarını yüksek kalite standartlarına ulaştırmayı başarmıştır.

Bu anlayış doğrultusunda ürün çeşitliliğini hızla artıran Mekas Kablo Sancaktepe'de bulunan 5000 m² üretim tesisini, 2021 yılında Kocaeli/Dilovası'nda bulunan 10.000 m² kapalı, 3.000 m² açık alan olmak üzere toplam 13.000m² yeni tesisine taşımıştır.

Bu yatırımların neticesi olarak tüm paydaşlarımızın katkısıyla 2021 yılında TOBB tarafından "Türkiye'nin Hızlı Büyüyen" şirketleri arasında ilk 100 şirket içerisinde 38. sıraya yükselmiş ve ödüle layık görülmüştür.

Gelişime açık, yenilikçi yönetim anlayışı ile Cumhuriyetimizin 100. yılı hedefinde ülkemiz adına stratejik önem taşıyan projelerde tedarikçi konumunda bulunan Mekas Kablo, iş ortaklarıyla iş birliği içerisinde geleceğe emin adımlarla yürümektedir.

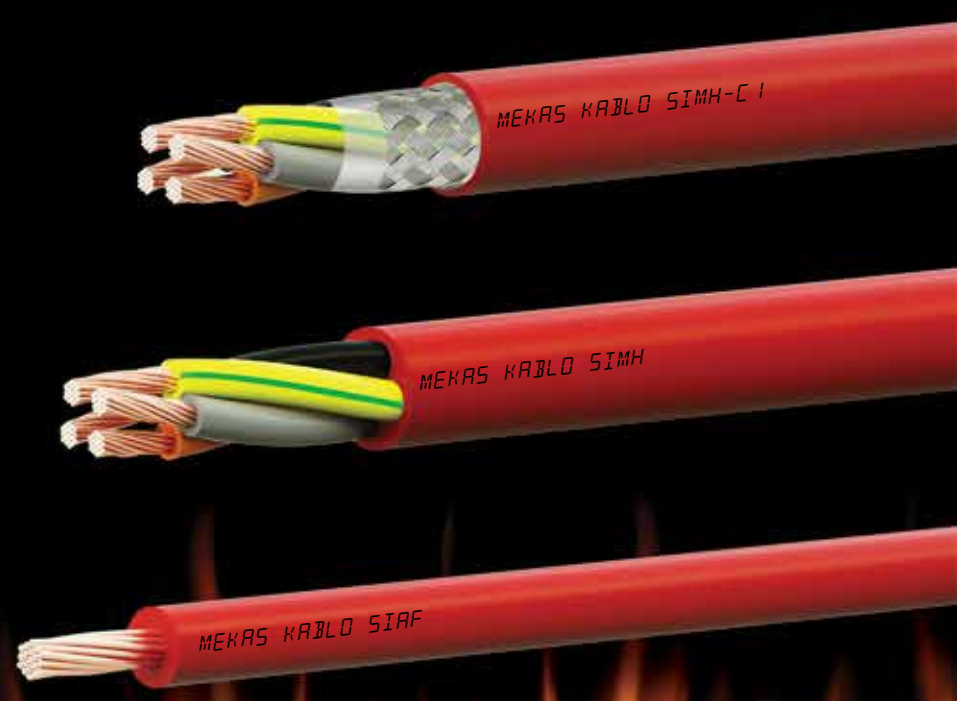

İçindekiler

6-7	• Silikon Kablolar (SIAF / SIMH / SIAF-GL / SIMH-O FE180)	
8-9	• PUR Kablolar (11YSL11Y / YSL11Y)	
10-13	• Kumanda Kabloları (YSLY-JZ / HSLH-JZ / YSLCY-JZ)	
14-23	• Sinyal Kontrol Kabloları (LIYY / LIHH / LIYCY / LIYCY-TP / LIHCH-TP / LIHCH / LIY(St)Y / LIH(St)H / LIY(St)CY / LIH(St)CH)	
24-25	• Data Lan Kabloları (CAT5E UTP / CAT6 UTP / CAT6 UTP LSZH / CAT6 UTP-PE / CAT6 PATCH)	
26-27	• Endüstri 4.0 Kabloları (PROFIBUS / PROFINET / RS-485 / CAT6A / CAT7 / DT8 / ZİL)	
28-29	• Yangın Alarm Kabloları (J-Y(St)Y...Lg / J-H(St)H...Lg / JE-H(St)H...Bd FE180 PH120)	
30-31	• Yangına Dayanımlı Kablolar (LIHH FE180 PH120 / LIHCH FE180 PH120 / LIH(St)H FE180 PH120)	
32-33	• Koaksiyel Kablolar (TV KABLoları 75 Ohm & TELSİZ KABLoları 50 Ohm)	
34-35	• Cctv Kablolar (1+2 / 1+4 KAMERA KABLoları)	
36	• Telefon Kabloları (PDV / HBH / BİTİŞİK YASSI KORDON / KÖKEN)

Endüstri 4.0 Kabloları

Robots all have some kind of mechanical construction. A frame, built or shaped designed to perform a particular task. For example, a robot designed to move around heavy dirt or mud, might use caterpillar tracks. The mechanical aspect is accurate, and doesn't require any of the flexibility of the environment around it. It only follows function.

Robots have electrical components added to power and control the mechanical parts. In a robot with caterpillar tracks, the electrical part of power to move the tracks is a motor, which will have to be connected to the power source. A robot's brain is an integrated brain system. A robot's brain is a set of neural networks that can be programmed to perform a task.

Power usually flows from a power source to the robot, and then to the mechanical parts. The power source is usually a battery, and the mechanical parts are usually a motor and a gear. The robot's brain is an integrated brain system. A robot's brain is a set of neural networks that can be programmed to perform a task.

All robots contain some kind of control programming code. A program is how a robot decides when to start to do something. In the case of a robot, a robot that needs to move around a factory, it would need to know where to go, and when to stop. A robot's brain is an integrated brain system. A robot's brain is a set of neural networks that can be programmed to perform a task.

Robots control, artificial intelligence and hybrid. A robot will usually control programming like a piece of software that it will only perform if and when it is given a signal from a central control. It is a software system, which is usually controlled primarily by human commands or by the structure of automation.

Artificial intelligence means that the robot can think for itself without a central control, and can determine its own path and actions. It is a software system, which is usually controlled primarily by human commands or by the structure of automation.

Artificial intelligence means that the robot can think for itself without a central control, and can determine its own path and actions. It is a software system, which is usually controlled primarily by human commands or by the structure of automation.

Artificial intelligence means that the robot can think for itself without a central control, and can determine its own path and actions. It is a software system, which is usually controlled primarily by human commands or by the structure of automation.

Artificial intelligence means that the robot can think for itself without a central control, and can determine its own path and actions. It is a software system, which is usually controlled primarily by human commands or by the structure of automation.
